

Application form

“Energiewende twinning towns”

Cities, municipalities and public utilities share their knowledge and experience with communities for a sustainable energy transition and a shared Europe. Application deadline: March 15th, 2019

Who can apply?

All European communities that already have cooperation or plan to launch a partnership with a German community can apply. The cooperation should foster the mutual exchange of knowledge related to promoting the energy transition on a local level. The communities involved can be cities, municipalities or local districts. The cooperation does not necessarily need to be a formal twinning agreement. Any form of cooperation is sufficient.

For better planning, please send us an informal expression of interest in advance. The deadline for applications is 15 March 2019.

Checklist for your application:

- You have some experience with projects related to renewable energies or the energy transition on a local level or are willing to put this topic on your agenda.
- You are willing to share experience and knowledge in a joint workshop.
- You are able to provide suitable premises to host a workshop.
- You are willing to support the project team in the organization and logistic preparation of the workshop.
- You are willing to travel.
- You are able to participate in the kick-off-event in Berlin on 28 May 2019 and at the final event in the second half of 2020.
- Representatives from all municipalities/communities have a sufficient level of proficiency in English to actively participate in the workshops.

If you can tick off the questions above, we look forward to receiving your application (see next section).

Application – Questions for the Energiewende twinning towns

renewables-in-germany.com

Please answer the following questions in an informal letter (maximum three pages) and send them to the Renewable Energies Agency.

- What
- Please provide some basic information on all partner communities (size, geographic characteristics, major industries ...)
- What kind of renewable energies do you use in the respective communities? What experience related to the energy transition do you have?
- What challenges and opportunities related to the energy transition do you see in your twinning community?
- What kind of experience gathered in your twinning community could be useful for you? Is one of the communities planning a specific project?
- Which local stakeholders (apart from the municipal administration) would you like to involve?
- Please name a contact person in each community and provide contact details in your application.

You can find detailed information on the scope of funding and the project here:
